The M68 protein is a member of a family of proteins which have croles in immune responses, cell death, cell proliferation and standard of cell differentiation. M68 lacks a transmembrane domain and is a secreted factor suggesting that it functions as a natural conhibitor for its ligand. The altered expression pattern of M68 in a multitude of tissues suggests that M68 may play a role in cancer by binding to its ligand and blocking apoptotic cell death induced by such a ligand. This anti-apoptopic role of M68 suggests that m68 modulators of M68 will be useful in treatment of apoptosis-related diseases such as various forms of cancer and various bone disorders. M68 mucleic acids and proteins are therefore useful for treating conditions involving atypical apoptosis and for identifying modulators of M68. Modulators of M68 are useful for treatment of cancer and other diseases associated with abnormal levels of apoptosis including systemic lupus erythematosus, Hashimoto's thyroiditis, Grave's disease, idiopathic myxodema, autoimmune cliver diseases, autoimmune gastritis, ulcerative colitis, glomerulonephritis, pulmonary fibrosis, heart failure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated human M68 nucleic acids and proteins which are part of the tumor necrosis factor receptor (TNFR) family, useful for identifying modulators that may be used to treat various diseases e.g. cancer,

The invention also provides for the TNRR-6 beta cDNA (AAV39086). TNFR-6 alpha and TNFR-6 beta are members of the tumour necrosis factor receptor (TNFR) family. TNFRs are expressed in endothelial cells, Keratinocytes, normal prostate and prostate tumour tissue. For a number of disorders of these cells,

particularly of the immune system, substantially altered (whether increased or decreased) levels of TNRF-6 alpha and/or TNFR-6 beta gene expression can be detected, therefore the TNFR-6 alpha and TNFR-6 beta polypeptides, nucleic acids and antibodies are claimed to be useful in the diagnosis of such disorders. Mutations of the TNFR-6 alpha and TNFR-6 beta genes can also be detected. The TNFR-6 alpha and also claimed to be useful for identifying ligands which may be useful in the treatment of apoptosis related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          900

alpha (TWFR-6alpha) of the invention. The TWFR-6alpha and TWFR-6beta DNA cand protein sequences can be used in the prevention, treatment and diagnosis of diseases associated with inappropriate TWFR expression. The nucleic acids, polypeptides, antibodies, agonists and antagonists against them may be used for the treatment of a range of conditions such as cidisorders associated with neovascularisation (especially ocular neovascularisation) (such as solid tumours and malignancies (e.g. prostate cancer, breast cancer and colon cancer), diabetic retinopathy and pre-maturity macular degeneration, allergies, inflammation, thyroid associated opthalmopathy tissue/cell damage, wounds, microbial and parasitic infections, bone disease (e.g. osteoporosis), atheroselerosis, pain, cardiovascular disease (e.g. stroke), neurodegenerative disorders (e.g. Alzheimer's disease, immune caltommune diabetes, asthma, psoriasis, septic shock and ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human tumour necrosis factor receptor (TNFR)-
Galpha and 6beta protein and their corresponding nucleic acids. The
invention provides screening methods for identifying agonists and
antagonists of TNFR-6alpha and 6beta activity. The invention also
provides diagnostic and therapeutic methods for detecting and treating
immune system-related disorders. The method is useful for treating or
preventing an inflammatory disease or disorder selected from bowel
disease, encephalitis, atherosclerosis and psoriasis, an autoimmune
disease or disorder selected from systemic lupus erythematorsus,
arthritis, rheumatoid arthritis, multiple sclerosis, Crohn's disease,
and autoimmune encephalitis, graft versus host disease (GVHD), and an
allergy or asthma. The present sequence is human TNFR-6alpha cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid molecules comprising a polynucleotide encoding humar tumor necrosis factor receptor (TNFR)-6alpha and 6beta polypeptides useful for treating disease e.g. inflammatory and autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 813; DB 24; Length 1077; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              607
synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CGCGTATACC. This library was created for the program, Gen Discovery in the Visual System, supported by National Eye
                                                                                                                                                             /tissue_type="fetal eye"

UT-E-EO1 is a normalized cDNA library containing the
following tissue(e): fetal eye. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
                                                                                                                                                                                                                                                                                                                                        /clone="UI-E-EO1-ajc-j-12-0-UI"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mRNA sequence.
/note="Organ: Stemach; Vector: pCNS; Site_1: EcoRI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation method. The cDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli ToplOF' with electroporation method."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequencing about 2,000 ~ 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           69.8%;

The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide

/note="Organ: pooled pancreas and spleen; Vector: pCMV-SPORT6; Site_1: Not1; Site_2: EcoRV (destroyed); RNA source anonymous pool of spleen and pancreas from 28 yo male. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.5 kb, insert size range 1-2.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 025. Note: this is a NIH_MGC Library."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB DB

US-08-974-186-1
US-08-974-186
Sequence 1, Application US/08974186
Patent No. 6284740
GENERAL INFORMATION:
APPLICANT: Lacey, David L.
APPLICANT: Calzone, Frank J.
APPLICANT: Chang, Ming-Shi
APPLICANT: Lacey, David Lacey, Ming-Shi
APPLICANT: Amgen Inc.
STREET: 1840 Dehavilland Drive
CITY: Thousand Oaks
STATE: California
COUNTRY: USA
ZIP: 91320-1789
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
